

WEBSITE TECHNICAL SEO AUDIT

Robots.txt & XML Sitemap Review

infinitytrips.in

Prepared for: Infinity Trips

Scope: Crawlability, indexability & sitemap structure

Date: July 12, 2026

Website Snapshot

BUSINESS	Infinity Trips — domestic & international holidays, MICE, trade fairs and corporate travel, based in Ahmedabad/Jamnagar, Gujarat.
PLATFORM	WordPress (custom theme), standard plugin-driven structure — the typical setup for robots.txt / sitemap.xml being auto-generated by an SEO plugin.
PRIMARY NAV	Home · About Us · Testimonials · Gallery · Trade Fairs · Domestic Holiday · International Holiday · Corporate Services · Contact Us
AUDIT FOCUS	Crawler access rules (robots.txt) and URL discovery file (sitemap.xml) — the two files search engines read before indexing any page.

How This Audit Was Performed

Important note on source data

Theliveinfinitytrips.in/robots.txt and infinitytrips.in/sitemap.xml files could not be pulled as raw text through our automated tooling at audit time. This deck therefore combines (a) a full crawl of the public site's real pages and links, and (b) Google/industry best-practice standards, to flag site-side issues we could directly verify, and to produce ready-to-upload replacement files. We strongly recommend the client's developer paste the exact current robots.txt / sitemap.xml content for a final line-by-line diff before publishing.

01

Full site crawl

Every internal link reachable from the homepage was followed to map real, live URLs, menu structure and page relationships.

02

Link integrity check

Every outbound and internal link was checked for correct domain, correct destination page, and working protocol (tel:, mailto:, https).

03

Standards comparison

Findings were checked against Google Search Central's robots.txt spec and the sitemaps.org XML protocol.

04

Corrected files generated

A clean robots.txt and sitemap.xml were rebuilt from the verified page inventory, ready for upload.

Verified Page Inventory (Crawl Results)

These are the real, live URLs found by following every link from the homepage — the same URLs a search engine sees, and the basis for the rebuilt sitemap on slide 9.

URL Path	Page
infinitytrips.in/	Homepage
infinitytrips.in/about-us/	About Us
infinitytrips.in/testimonials/	Testimonials
infinitytrips.in/gallery/	Gallery
infinitytrips.in/trade-fairs/	Trade Fairs hub
infinitytrips.in/category/domestic-holiday/	Domestic Holiday (category)
infinitytrips.in/category/international-holiday/	International Holiday (category)
infinitytrips.in/corporate-services/	Corporate Services
infinitytrips.in/corporate-tours/	Corporate Tours
infinitytrips.in/mice/	MICE
infinitytrips.in/domestic-holidays-2/	Domestic Holidays (landing)
infinitytrips.in/domestic-holidays/	Linked as “International Holidays” (see issue ·3)
infinitytrips.in/contact-us/	Contact Us
infinitytrips.in/gifa-2023/	Trade fair post (old slug, see issue ·4)
infinitytrips.in/cphi-worldwide-2023/	Trade fair post (old slug, see issue ·4)

Real Issues Found During the Crawl

- 1

Footer links point to the wrong domain

Every “Quick Links” item in the footer (About Us, Trade Fair, International/Domestic Holiday, Corporate Services) points to [reviewz.co.in/infinitytravel/...](https://reviewz.co.in/infinitytravel/) instead of infinitytrips.in. Visitors and crawlers following these links leave the site entirely.
- 2

Dead placeholder links

The Twitter and LinkedIn footer icons, and the phone/email contact links, use `"#"` or `javascript:void(0)` instead of real URLs, `tel:`, or `mailto:` links — a broken experience for users and a missed crawl/trust signal for search engines.
- 3

Mismatched homepage card link

The homepage “International Holidays” tile links to `/domestic-holidays/`, not an `international-holidays` page — likely a copy-paste error in the theme's homepage widget.
- 4

Outdated post slugs vs. titles

Trade fair posts titled “WIRE & TUBE CHINA 2024” and “ITMA ASIA + CITME 2024” still live at the old URLs `/gifa-2023/` and `/cphi-worldwide-2023/`, which is confusing for both users and search engines matching title to URL.

Checklist Applied to infinitytrips.in

File location

Must sit at the exact root: infinitytrips.in/robots.txt — not in a subfolder, or crawlers won't find it.

Sitemap directive present

The file must reference the sitemap with a full URL: Sitemap: <https://infinitytrips.in/sitemap.xml>

No accidental "Disallow: /"

The single most common launch-day mistake — it blocks the entire site from every search engine.

No blocked CSS/JS

Google renders pages like a browser; blocking /wp-content/themes/ or /wp-content/plugins/ can distort how the site is evaluated.

wp-admin handled correctly

Block /wp-admin/ but explicitly Allow /wp-admin/admin-ajax.php, which many theme features depend on.

Single canonical host

Rules should apply consistently to the <https://infinitytrips.in> host (not a mix of http/https or www/non-www).

REBUILT FILE

Recommended robots.txt

Save as plain text (UTF-8) at the site root: *infinitytrips.in/robots.txt*

```
Useragent: *
Allow: /
Disallow: /wp-admin/
Allow: /wp-admin/admin-ajax.php
Disallow: /wp-includes/
Disallow: /wp-content/uploads/wpforms/
Disallow: /cgi-bin/
Disallow: /xmlrpc.php
Disallow: /?s=
Disallow: /search/
Disallow: /*?replytocom=
Disallow: /trackback/
Disallow: /feed/
Disallow: /comments/feed/
Disallow: /*/feed/

Sitemap: https://infinitytrips.in/wp-sitemap.xml
```

Checklist Applied to infinitytrips.in

1

Only real, canonical URLs

Every `<loc>` should be a live, 200-OK page on infinitytrips.in — no redirected, 404'd, or off-domain URLs like the reviewz.co.in links found in the footer.

2

Valid XML structure

Must open with the `<urlset>` tag and the sitemaps.org namespace, with one `<url>` block per page and a `<loc>` child — malformed XML is silently ignored by crawlers.

3

Consistent, real host

All URLs must share one host: `https://infinitytrips.in` — not a mix of `http/https` or `www/non-www`.

4

Realistic `<priority>` & `<changefreq>`

These are hints, not commands — the homepage and core service pages (Trade Fairs, Holidays, Corporate) should rank highest; one-off trade-fair posts lowest.

5

Referenced from robots.txt

The Sitemap: line (slide 7) must point to this exact file so crawlers can auto-discover it.

Recommended Action Plan

Do Now	Do This Week	Ongoing
• Fix footer Quick Links so they point to infinitytrips.in, not reviewz.co.in • Replace "#" / javascript:void(0) links with real tel:, mailto: and social URLs • Correct the “International Holidays” homepage tile link	• Publish the rebuilt robots.txt at the site root and test in Search Console • Publish the rebuilt sitemap.xml and submit it in Search Console • Rename or 301-redirect the mismatched trade-fair post slugs	• Re-submit the sitemap after every new page or trade-fair post • Re-check robots.txt after any theme, plugin or hosting change • Monitor the Search Console “Pages” and “Sitemaps” reports monthly

Thank You
